

Alex Bibeau

1)

$$\frac{0.02 \times 0.08}{0.02 \times 0.08 + 0.98 \times 0.096} = \frac{0.016}{0.11008} = 0.144 = 14\%$$

2)

The probability that it incorrectly tests positive is not the same as the regular 20% of the previous problem.
