

1. **An experiment involves tossing a coin 3x. What is the sample space of this experiment?**

The sample space would be 2^3 , or 8

2. **How many of the outcomes in the sample space had two heads?**

There would be 3 outcomes

3. **Define event A to be that the experiment yields two heads. Define event B as the experiment yielding two tails. What is $A \cup B$ and $A \cap B$?**

$A \cup B = 0$, $A \cap B = 100\%$
